eMotos: Consistency Across the Region

Creating consistent policy and regulatory recommendations for the MAPA region to keep people safe while moving.

About:

The rapid rise of electric micro-mobility devices, particularly “e-motos,” is creating new opportunities for recreation and transportation, but also new safety concerns.

Bike Walk Nebraska, MAPA and the Papio-Missouri River NRD are teaming up to **generate a toolkit of policy and regulation recommendations for municipalities** in MAPA’s Transportation Management Area.

Consistent Options
Creating a toolkit of recommendations for consistency in the region.

Safety and Access
Protecting access for valid devices while supporting safe usage.

Realistic Enforceability
Ensuring policy and regulations are clear and easily enforceable.

How e-Motos Compare to e-Bikes:

It’s difficult to tell the difference between the two just by looking at them, but here are some key traits of emotos:

- **Propelled by a throttle or foot pegs.**
- **Increased speeds of 50-60 mph.**
- **Usually has inoperable pedals.**
- **eBikes are classified in state statute.**

Project Timeline

- **Stakeholder Engagement**
  Summer/Fall 2026
- **Trail & Roadway Counts**
  September 2026
- **State Policy Recommendations**
  October 2026
- **Local Policy Recommendations**
  March 2027
